MEMORANDUM FOR THE RECORD

SUBJECT: Telephone call from Admiral Inman, 21 July 1979

Inman called to give some quick reactions to the current draft of the STOF air/land paper.

He thinks the paper is much improved over the last version he read. There are only two points that he would wish to raise:

1. The treatment of the strategic intelligence phase still overlooks the contribution of [redacted]. The section talks about the vulnerability of sites like [redacted] and others but does not mention the possible contribution of other, less vulnerable sites.
2. The paper still falls short in the contingency area, far from the well-covered areas of Europe. There it does not touch on the preparations required to maintain the global data base in order to increase efficiently COMINT production in the area of some contingency.
